

Define Problem Statements

Date	05 July 2026
Team ID	AIML-HDI-2026
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template)

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps focus on what matters to create experiences people will love. A well-articulated problem statement allows the team to find the ideal solution for the customers' challenges, while empathizing with how they perceive the product or service.

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A government policy analyst / development-studies researcher	Quickly estimate a country's HDI score and development tier from a handful of indicators	I rely on slow, manual application of the UNDP geometric-mean formula across normalized sub-indices	there is no interactive tool that learns the indicator-to-HDI relationship directly from historical data	frustrated and unsure about exploring “what-if” policy scenarios
PS-2	A student or journalist researching national development trends	Compare countries and understand which socio-economic factors drive HDI	spreadsheet-based comparisons are fragmented across multiple data sources	there is no single, browser-accessible dashboard combining prediction and classification	overwhelmed by disconnected tools and inconsistent data

Root Cause Summary

Both problem statements converge on the same root cause: official HDI computation requires combining normalized health, education, and income sub-indices through a fixed formula that is not accessible for rapid, exploratory, or predictive use. This motivated the team to design a hybrid deep-learning model that reproduces the indicator-to-HDI relationship and exposes it through an interactive web dashboard.
